

Develop a mobile application

Team ID	PNT2022TMID18361
Project Name	Smart-Farmer IOT enabled smart farming application

To develop a mobile application, temperature, humidity and soil moisture sensors are used to get the results. For that, we have to design an application that will shows the temperature, humidity and Soil moisture values in the screen. We use switch board. It is used to check whether the motor is in on or off condition.
